GENERAL INFORMATION:
APPLICANT: The Regents of the University
APPLICANT: of California
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR REDUCING
TITLE OF INVENTION: ADHESIVENESS OF DEFECTIVE RED BLOOD CELLS
NUMBER OF SEQUENCES: 43
                                                                                                                                                                                                                                                      Sequence 9, Application US/08985499
Patent No. 6191103
GENEAL INFORMATION:
APPLICANT: Sherman, Irwin
APPLICANT: Sherman, Irwin
APPLICANT: VON Andrian, Ullich
TITLE OF INVENTION: Methods for Enhancing Thrombolysis in a
TITLE OF INVENTION: Ammmal

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Residues: 361-911 <HAM>
C; Comment: Band 3 is the major integral glycoprotein of the erythrocyte membrane. A
C; Comment: Band 3 has at least two functional domains. Its integral domain mediates
ing sites for cytoskeletal proteins, glycolytic enzymes, and hemoglobin.

erythrocyte anion exchanger homolog AE3 - mouse
C; Species: Mus musculus (house mouse)
C; Date: 02-Feb-1990 #sequence_revision 02-Feb-1990 #text_change 20-Aug-1999
C; Accession: A33698
E; Kopito, R.R.; Lee, B.S.; Simmons, D.M.; Lindsey, A.E.; Morgans, C.W.; Schneider, K. Cell 59, 927-937, 1989
A; Title: Regulation of intracellular pH by a neuronal homolog of the erythrocyte anio A; Reference number: A33638; MUID:90075236; PMID:2686841
A; Recession: A33638
A; Status: preliminary
A; Molecule type: mRNA
A; Recences: GB:M28383; NID:9191735; PIDN:AAA37184.1; PID:9309095
C; Superfamily: band 3 anion transport protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

A;Title: Primary structure and transmembrane orientation of the murine anion exchange
                                                                                                                                                 A; Map position: 17q21-17q22
C; Superfanily: band 3 anion transport protein
C; Keywords: acetylated amino end; glycoprotein; ion transport; phosphoprotein; transm
F:1-403/Region: cytoskeletal protein binding
                  C;Comment: Band 3 has at least two functional domains. Its integral domain mediates ing sites for cytoskeletal proteins, glycolytic enzymes, and hemoglobin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A; Cross-references: GB:J04793; NID:g203092; PIDN:AAA40800.1; PID:g203093 C; Superfamily: band 3 anion transport protein C; Keywords: alternative splicing; transmembrane protein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                        C.Keywords: acetylated amino end; glycoprotein; ion transport; phosphoprotein; transm
F:7-403/Region: cytoskeletal protein binding
             C;Comment: Band 3 has at least two functional domains. Its integral domain mediates ing sites for cytoskeletal proteins, glycolytic enzymes, and hemoglobin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C;Species: Rattus norvegicus (Norway rat)

A; Title: CDNA cloning and localization of a band 3-related protein from ileum.
A; Accession: A56764
A; Accession: A56764
A; Status: preliminary
A; Molecule type: mRNA
A; Molecule type: mRNA
A; Molecule type: mRNA
A; Molecule type: mRNA
A; CTOSS-references: GB:S45791; NID:G256659; PIDN:AAB23488.1; PID:g256660
A; CTOSS-references: GB:S45791; NID:G256659; DIDN:AAB23488.1; PID:g256660
A; Experimental source: New Zealand White rabbit, ileal epithelial cells
A; Note: sequence extracted from NCBI backbone (NCBIN:115180, NCBIP:115181)
C; Superfamily: band 3 anion transport protein
                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          anion exchange protein 2 - human

                                                                                                                                                                                                                                                                                                                                                                                  ŏ
                                                                                                                                                                                                                                                                                                                                                                                  ö
                                               The invention relates to an isolated Band 3 polypeptide that comprises any of 4 20 residue amino acid sequences, or their fragments that bind to an MSPP-1 polypeptide or a polypeptide with any of 8 291.131 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and a cognate molecule present in the host and subsequently minimising therapputic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present sequence is human Band 3 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated Band 3 polypeptide that comprises any of 4 20 residue amino acid sequences, or their fragments that bind to an MSP-1 polypeptide or a polypeptide with any of 8 291-1331 base pair sequences. The methods and compositions of the present invention are useful for the prevention and treatment of malarial infection. The present invention, develops new and more improved methods based upon inhibiting the particular interactions between the malarial parasite and a cognate molecule present in the host and subsequently minimising harmful side effects and drug resistance that may be due to non-specific therapeutic approaches. The invention is useful in gene therapy. The present invention also provides a vaccine for malaria. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which human liver single exon encoded peptides of the invention.

Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; liver; cirrhosis; hyperlipoproteinaemia; hyperlipidaemia; hypercholesterolaemia; coronary heart disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human genome-derived single exon nucleic acid probes useful for analysing gene expression in human adult liver

```
The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see Mas11852-Mas41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human brain expressed single exon probe encoded protein SEQ ID NO: 31897.
            Protein #6029 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                          Single exon nucleic acid probes for analyzing gene expression in human hearts -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; brain expressed exon; gene expression analysis; probe;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

```
probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for
                                                                                                                                                                                                      present invention provides a number of single exon nucleic acid
                                                                                                                   Human genome-derived single exon nucleic acid probes useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             genome-derived single exon nucleic acid probes useful for
                                                                                                                                                                  Example 4; SEQ ID NO: 32683; 658pp + Sequence Listing; English.
